Foreword

WITH THE enactment of the health insurance program for the aged (Medicare), it became possible to organize a continuing information system to report the use of health care services by older Americans. Since Medicare began, one of the basic tasks has been to process and pay claims for covered medical services submitted by or on behalf of the 19.8 million persons entitled to hospital insurance benefits and the 18.8 million persons enrolled for supplementary medical insurance benefits. From this operation come data on the amount, the kind, and the cost of such services used by the aged.

This report is one in a series of publications designed to disseminate such data on a regular basis. It provides detailed statistical information on hospitals participating under Medicare. Other reports in the series will present the number and characteristics of participating home health agencies, extended care facilities, independent laboratories, of the insured population, and the utilization of medical care services. A listing of these reports appears on the inside cover. The reports are intended to give a comprehensive account of the amounts reimbursed under the program, the kinds of services paid for, and the variations in utilization and reimbursement by age, race, and sex of the beneficiary, as well as his place

of geographic residence. Such data can provide new insights into the patterns of medical care for persons aged 65 and over. A fuller understanding of present practice can contribute to improved health services not only for the aged but for the general population of the United States as well.

Many individuals in the Social Security Administration have assisted with the development of this series. The preparation of these reports is a major function of the ORS Division of Health Insurance Studies under the supervision of Howard West, director, and Aaron Krute, deputy director, and involving a majority of its staff. Important contributions for the tabulation and presentation of the statistical content of this report were made by Frank L. Kirby, Harvey L. Engbretson, Charles G. Scott, and Theodosia Rasberry of the Statistical Processing and Procedures Branch of that division. Text preparation was the responsibility of David Allen and Marcia Schwartz of the Provider Statistics Branch. Special acknowledgments for publication services are made to the Division of Operating Facilities in the Office of Administration, and to the Division of Health Insurance Statistical Data of the Bureau of Data Processing for tabulating services.

IDA C. MERRIAM,
Assistant Commissioner for Research and Statistics.

The Statistical System

THIS PUBLICATION is a section of a statistical report series produced from Medicare program records. Presented on a calendar year basis, describing services rendered in the year, the series includes sections on enrollment, characteristics of providers, inpatient care in hospitals and extended care facilities, outpatient hospital services, home health services, physicians' and other medical services, and overall summaries.

The primary objective of these reports is to provide data required to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by persons aged 65 and over, as well as the expenditures for such services. The applications by hospitals, extended care facilities, home health agencies, and independent laboratories to participate in the program provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the program services utilized and the demographic characteristics of each individual recorded in the health insurance entitlement master file.

The data-collection system has two inherent characteristics that determine the scope, detail, and flexibility of the available data. First, data are collected and maintained on an individual basis so that the beneficiary and his medical experience under the program form the basic unit. Second, records for each bill paid under the program and, for a sample of beneficiaries, records of diagnoses and surgical procedures are maintained on a centralized basis. Except for intermediary operating statistics such as those relating to workloads, costs, and the like, all program statistics are centrally prepared.

THE BASIC RECORDS

The statistical system is based on five related computer-tape records: the health insurance entitlement master file, provider record, hospital insurance (Part A) utilization record, medical insurance (Part B) payment record, and the record containing information from medical insurance bills for a 5-percent sample of supplementary medical insurance enrollees.

THE HEALTH INSURANCE ENTITLEMENT MASTER FILE

The health insurance entitlement master file identifies each aged person eligible for health insurance benefits and indicates whether he is entitled to hospital benefits, to supplementary medical insurance benefits, or to both of these benefits.

This record is used to create a health insurance card that is sent to each insured person. The card contains the individual's claim number (the number used for OASDI or railroad retirement programs). It indicates the entitlement of the individual for the two parts of the Medicare program.

The entitlement record provides the population data for each part of the program and therefore serves as the base for the compilation of a variety of utilization rates, limited only by its demographic content.

PROVIDER RECORD

Every hospital, home health agency, extended care facility, and independent laboratory must apply for participation in the hospital insurance program in order to be reimbursed for services provided. Data included on the application forms have been recorded in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care to the kinds and amounts of service used by persons insured under Medicare.

UTILIZATION RECORD FOR HOSPITAL INSURANCE

The administration of the hospital insurance program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he has used the benefits available to him under the "benefit period" concept.

When the patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Social Security Administration for recording in the central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and the number of days remaining during the "benefit period."

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When approval for payment has been made, the intermediary forwards the claim to the Social Security Administration for inclusion in the central record.

As part of this process, information on diagnoses and surgical procedures are coded for a 20-percent

of the Medicare Program

sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Copies of admission and billing forms are handled in a comparable manner by home health agencies and extended care facilities. The outpatient billing form is also transmitted to the Social Security Administration for recording in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospital and extended care facilities that is needed to administer the "benefit period" provision is recorded in the central record. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or extended care facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting tape record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons that contains all the available information needed for tabulation from the three files related to Part A utilization.

PAYMENT FOR MEDICAL INSURANCE

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills having allowed charges exceeding \$50 during a calendar year period.

For the insured population, carriers need to know from a central source that the deductible has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Social Security Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

For administration and operation of the program, the Social Security Administration must have accurate and complete information on the amounts paid by the carriers for physician services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card, or other machine-readable record of each bill paid. A "bill" is defined as a request for payment from or on behalf of a beneficiary as the result of services provided by a single physician or supplier.

The payment record also contains selected items of information needed to supply an efficient basis for drawing samples of the bills. These items provide a sampling frame that may be used to draw additional

samples designed to obtain specific information not furnished reliably by the basic sample of enrolled persons under the medical insurance program.

THE MEDICAL INSURANCE SAMPLE

Although the payment record provides a rapid method for summarizing payment data and a sampling frame for efficiently drawing additional samples of bills, it does not provide specific data on diagnoses, procedures, and related charges.

Basic statistics on the utilization of physician and other services covered under the supplementary medical insurance program are derived from bills paid by intermediaries to or on behalf of a continuous 5-percent sample of all enrolled persons. Intermediaries have been given specific combinations of digits of the health insurance claim number to be used in selecting the 5-percent sample, which is a subsample of the 20-percent sample used for hospital insurance program data.

Bills are submitted either directly on an SSA request for payment form, or on the SSA form in combination with the physician's billing form. Both methods are designed to provide information on the date and place of each service, the procedure carried out or service provided, the condition treated (diagnosis), and the physician's or supplier's charge for the specific service.

All of the bills of persons in the 5-percent sample to or for whom payment is made under the program, including those used to meet the annual \$50 deductible, are included in the sample and coded. However, data are not available through these procedures for persons in the sample who do not meet the \$50 deductible. Such data are collected by means of the Current Medicare Survey, with data made available in a separate report series.¹

For hospital-based physicians who have authorized the provider to collect the fee for their services, the provider billing for patient services by physicians form is used. This form is completed for each patient. It includes descriptive information on the date and place of each service, the diagnoses, procedures, and the charges. These bills are received centrally for the 5-percent sample of persons enrolled for supplementary medical insurance. Beginning April 1, 1968, it is also possible for the hospital to include payments for radiology and pathology services directly on the hospital bill.

¹ Jack Scharff, "Current Medicare Survey: The Medical Insurance Sample," *Social Security Bulletin*, April 1967.

Hospitals Participating in the Medicare Program

TITLE XVIII of the Social Security Act, introduced as part of the 1965 amendments, provides health insurance protection for the aged. To implement the law, two separate but complementary programs were established. The first of these, the hospital insurance (HI) program, provides protection against the cost of hospital and related post-hospital care. The second, termed supplementary medical insurance (SMI), provides coverage of physicians' services and a number of other health items and services not included under the HI program.

Hospitals certified to provide services to Medicare beneficiaries include short-term general and specialty hospitals; tuberculosis, psychiatric, and other long-term general and specialty hospitals; and Christian Science sanatoriums. To participate in the program and be reimbursed for services provided, a hospital must meet statutory requirements and be in substantial compliance with conditions established by the Secretary of Health, Education, and Welfare, in the interest of the health and safety of patients.¹ The hospital must also enter into an agreement with the Social Security Administration not to charge for covered items and services, except deductibles and coinsurance amounts, and to reimburse the patient where such charges have been made in error. The hospital must also agree to provide services on a non-discriminatory basis in accordance with Title VI of the Civil Rights Act of 1964.²

Hospitals are considered in substantial compliance with the conditions of participation if:

1. The hospital is accredited by the Joint Commission on Accreditation of Hospitals, and has established a utilization review plan, and such plan is in effect on or before the first day a hospital becomes a participating provider, or
2. The hospital meets the statutory requirements (Section 1861 (e) of the Act) and is found to be operating in accordance with all conditions of participation with no significant deficiencies, or

¹ For the statutory definition of a "hospital," and the detailed conditions of participation, see the Code of Federal Regulations, Title 20, Chapter III, Part 405, "Conditions of Participation: Hospitals" (HIR-10), Social Security Administration.

² See "Conditions of Participation."

3. The hospital meets the specific statutory requirements of Section 1861 (e) of the Act, but is found to have deficiencies with respect to one or more conditions which:

- a. It is making reasonable plans and efforts to correct, and
- b. Notwithstanding these deficiencies, is rendering adequate care without hazard to the health and safety of individuals being served, taking into account special procedures or precautionary measures that have been, or are being, instituted.

This report presents data on selected characteristics of the hospitals that met the conditions for participation in the Medicare program at any time during calendar year 1968.

During calendar year 1968, 6,922 hospitals in the United States and outlying areas with approximately 1.16 million adult beds had been certified to provide hospital services to the population 65 years of age and over covered by hospital insurance under Medicare. This represents a net decrease from 1967 of only 37 hospitals and 1,701 adult beds. The largest relative and actual decreases were registered in the South, where the South Atlantic, East South Central, and West South Central States lost six, four, and 16 hospitals, respectively—a total of 26 hospitals in all.

The approximately 1.16 million adult beds in the 6,922 institutions certified in 1968 were available to the general population as well as to Medicare enrollees. The discussion in this report is limited to the distribution of certified facilities as they are related to the Medicare population.

Table A.—Number of participating hospitals and beds, by division, 1966–68

| Division | Hospitals | | | Beds (in thousands) | | |
|--------------------------|-----------|-------|-------|------------------------|---------|---------|
| | 1966 | 1967 | 1968 | 1966 | 1967 | 1968 |

| Pacific ----- | 842 | 851 | 855 | 148.6 | 136.0 | 136.0 |

Characteristics of Hospitals

Most of the certified hospitals (almost 91 percent) were general and specialty hospitals classified as short-stay facilities reporting an average length of stay of less than 30 days (table B). Such hospitals contained two-thirds of the beds in certified hospitals. The remaining certified hospitals were long-stay facilities where the average length of stay is 30 days or more. Data for specialized long-stay hospitals serving tuberculosis and psychiatric patients are shown separately from data for all other long-stay hospitals.

Table B.—Number and percentage distribution of participating hospitals and beds, all areas, 1968

| Type of hospital | Hospitals | | Beds | |
|--------------------|-----------|-------------------------|-----------|-------------------------|
| | Number | Percentage distribution | Number | Percentage distribution |
| All areas ----- | 6,922 | 100.0 | 1,159,914 | 100.0 |
| Short-stay ----- | 6,276 | 90.7 | 780,454 | 67.3 |
| Long-stay ----- | 646 | 9.3 | 379,460 | 32.7 |
| Tuberculosis ----- | 120 | 1.7 | 25,981 | 2.2 |
| Psychiatric ----- | 344 | 5.0 | 314,149 | 27.1 |
| Other ----- | 182 | 2.6 | 39,330 | 3.4 |

American Hospital Association data.—The number of hospitals, both in the aggregate and by type, and number of beds shown in this report differ from comparable figures for calendar year 1968 reported by the American Hospital Association in the annual Guide Issue of *Hospitals*, which listed the characteristics of member hospitals as of September 30, 1968.³ The Social Security Administration figures do not include those hospitals denied participation, and those not applying for certification. The American Hospital Association does not register hospitals with fewer than six beds; there is no such limitation for participation under the Medicare certification requirements. Osteopathic hospitals are excluded from AHA membership, but can be certified under Medicare. In addition, the participating hospitals include about 100 general hospitals that are actually distinct parts of psychiatric and tuberculosis hospitals representing the active-care medical and surgical beds in these facilities which, as an entire institution, are not accredited by the Joint Commission on Accreditation of Hospitals. In some instances, active-care psychiatric units of the same hospitals may also be counted here as psychiatric hospitals. A number of medical centers are counted as one hospital while, in other cases, different components of the medical centers are counted separately, depending on the way in which certification was requested.

Type of control.—Fifteen percent of all participating hospitals are controlled by proprietary (or profit-making) organizations, 53 percent by voluntary (nongovernment) organizations, and the remainder by State and local governments (table C). The distribution by control is much the same for short-stay hospitals as for all hospitals since they represent almost 91 percent of the total number of hospitals.

³ *Hospitals* (Journal of the American Hospital Association), Guide Issue, August 1, 1969.

The ownership pattern of long-stay hospitals is quite different, however. The majority of tuberculosis and psychiatric hospitals are run by State and local governments (note that the distribution of ownership of other long-stay hospitals actually comprises an aggregate of several distinct subgroups of long-stay hospitals, including rehabilitation facilities and other such specialized long-term hospitals, and thus differs from the other two distributions). Generally, the proportions of long-stay hospitals that are voluntary or proprietary are smaller than that for short-stay hospitals. Because of the differences in their functions, distributions, and characteristics, data for the short-stay and long-stay hospitals are discussed separately.

Table C.—Percentage distribution of participating hospitals, by type of hospital, and control, all areas, 1968

| Type of control | All hospitals | | Short-stay hospitals | Long-stay hospitals | | |
|--------------------------|---------------|---------|----------------------|---------------------|-------------|-------|
| | Number | Percent | | Tuberculosis | Psychiatric | Other |
| Percentage distribution | | | | | | |
| All areas ---- | 6,922 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Voluntary ----- | 3,685 | 53.2 | 56.3 | 5.8 | 17.7 | 44.5 |
| Proprietary ----- | 1,007 | 14.6 | 14.9 | 0.8 | 16.6 | 8.8 |
| State ¹ ----- | 539 | 7.8 | 3.6 | 51.7 | 62.8 | 18.7 |
| Local ----- | 1,691 | 24.4 | 25.2 | 41.7 | 2.9 | 28.0 |
| All areas ---- | 6,922 | 100.0 | 90.7 | 1.7 | 5.0 | 2.6 |

¹ Includes 6 Federal hospitals not shown in detail.

SHORT-STAY HOSPITALS

Short-stay hospitals provided 40 hospital beds per 1,000 persons enrolled for hospital insurance in 1968. The ratios of adult beds to the aged population shown for each geographic area in table 3.1.1 (and summarized in table D) ranged from 27 and 28 for Mississippi and Florida, respectively, to 67 for the District of Columbia, and up to 111 beds per 1,000 enrollees in Alaska, where there are relatively few persons aged 65 and over. The ratio for most States falls between 30 and 50 beds per 1,000 insured persons.

Table D.—Percentage distribution of adult beds in participating short-stay hospitals per 1,000 enrolled population, July 1, 1968

| Adult beds per 1,000 enrolled population | Number of States ¹ | Percentage distribution |
|--|-------------------------------|-------------------------|
| Total ----- | 54 | 100.0 |
| 20.0-29.9 ----- | 2 | 3.7 |
| 30.0-39.9 ----- | 19 | 35.2 |
| 40.0-49.9 ----- | 26 | 48.1 |
| 50.0-59.9 ----- | 3 | 5.6 |
| 60.0-69.9 ----- | 1 | 1.8 |
| 70.0 or more ----- | 3 | 5.6 |

¹ Includes 50 States, District of Columbia, Guam, Puerto Rico, and Virgin Islands.

However, as noted previously, the effective number of beds available for use by Medicare enrollees depends, in part, on the size of the *total* population

in the area and their utilization of short-stay hospitals.

Bed size.—In all areas, there were only 54 short-stay hospitals with more than 750 adult beds. None of these were privately owned; 26 were voluntary, while 28 were run by State or local governments. On the average, proprietary hospitals were substantially smaller than either voluntary or non-Federal government hospitals: 86 percent of the proprietary hospitals had fewer than 100 beds, compared with only half (49 percent) of the voluntary hospitals (table E). The median bed size of all voluntary hospitals is more than twice that of proprietary ones (table F). Short-stay hospitals run by State governments had the largest median bed size of all—112—twice as large as comparable hospitals under local public ownership.⁴

Table E.—Number and percentage distribution of participating short-stay hospitals by control and bed size, all areas, 1968

| Bed size | All hospitals | Total | Voluntary | Proprietary | State ¹ | Local |
|-------------------------|---------------|-------|-----------|-------------|--------------------|-------|
| Percentage distribution | | | | | | |
| All areas ----- | 6,276 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Less than 25 beds ---- | 674 | 10.7 | 6.1 | 22.4 | 17.2 | 13.4 |
| 25-49 ----- | 1,617 | 25.7 | 19.3 | 37.5 | 8.8 | 35.8 |
| 50-99 ----- | 1,549 | 24.6 | 23.3 | 25.9 | 20.4 | 27.6 |
| 100-149 ----- | 776 | 12.4 | 14.9 | 7.7 | 16.7 | 8.9 |
| 150-199 ----- | 479 | 7.6 | 10.2 | 3.3 | 7.9 | 4.3 |
| 200-249 ----- | 336 | 5.4 | 7.3 | 2.6 | 5.7 | 2.6 |
| 250-299 ----- | 230 | 3.7 | 5.5 | 0.3 | 4.0 | 1.5 |
| 300-399 ----- | 306 | 4.9 | 7.1 | 0.3 | 7.9 | 2.2 |
| 400-499 ----- | 144 | 2.3 | 3.3 | — | 3.5 | 1.2 |
| 500-749 ----- | 111 | 1.8 | 2.3 | — | 3.5 | 1.4 |
| 750-999 ----- | 37 | 0.6 | 0.6 | — | 3.1 | 0.5 |
| 1,000-1,999 ----- | 13 | 0.2 | 0.1 | — | 1.3 | 0.4 |
| 2,000 or more ----- | 4 | 0.1 | — | — | — | 0.2 |

¹ Includes 6 Federal hospitals not shown in detail.

The median bed size of all short-stay hospitals was 77 beds; that of voluntary hospitals (accounting for over 56 percent of all short-stay facilities) was more than twice that of both proprietary and local hospitals (table F). Regional bed-size variations are even more pronounced: short-stay hospitals in the Northeast are substantially larger than in all other regions (except for those run by State governments—which account for only 175 of the total of 6,173 hospitals in the 50 States and the District of Columbia). The predominance in the average (median) size of Northeastern hospitals can be accounted for by the relatively large numbers of nonprofit and municipal hospitals in the larger urban areas of this region. These also include many of the very largest teaching hospitals in the country, which are located primarily in the Northeastern region.

Factors tending to depress the average size of short-stay hospitals outside the Northeastern region include the lower relative degree of urbanization in these other regions, as well as the large numbers of relatively small municipal and religious nonprofit hospitals which abound in the larger States which comprise the three other regions.

Table F.—Median bed size of participating short-stay hospitals, by control and region, 1968

| Region | All hospitals | Voluntary | Proprietary | State ¹ | Local |
|---------------------|---------------|-----------|-------------|--------------------|-------|
| All areas ----- | 77 | 104 | 43 | 112 | 52 |
| United States ----- | 78 | 104 | 43 | 138 | 52 |
| Northeast ----- | 143 | 149 | 115 | 126 | 179 |
| North Central ----- | 79 | 99 | 42 | 127 | 48 |
| The South ----- | 64 | 95 | 38 | 262 | 56 |
| The West ----- | 60 | 82 | 46 | 62 | 44 |

¹ Includes 6 Federal hospitals not shown in detail.

The distribution of hospital size also varies across the country. Table G shows the percentage of hospitals in each geographic division by bed size. The highest proportion of large hospitals is found in the Middle Atlantic States. About three-fourths of the short-stay hospitals in the West North Central, East South Central, West South Central, and Mountain States have fewer than 100 beds.

Table G.—Number and percentage distribution of participating short-stay hospitals, by bed size and division, 1968

| Division | All hospitals | Bed size | | | | |

Facilities and services.—Table 3.1.7 shows the number of participating hospitals reporting services and facilities available to their patients. For short-stay hospitals only, the percentages reporting each of the 22 identifiable facilities and services are shown in descending order in Table H. Almost all short-stay hospitals report having five services—a clinical laboratory, diagnostic X-ray equipment, an operating room, electrocardiography, and an emergency room. Availability of the remaining 17 services and facilities generally varies according to the bed size of the hospital. As expected, the larger hospitals generally have the most comprehensive services.

There is considerable variation across geographical divisions in the percentages of services and facilities in participating short-stay hospitals (table J). Aside from the five services noted above as being almost uniformly present in almost every short-stay hospital,

⁴ "Local" hospitals are those run by cities, counties, joint city-county authorities, and hospital districts.

Table H.—Percent of short-stay participating hospitals reporting specified facilities and services by bed size, all areas, 1968

| Facilities and services | All hospitals | Bed size | | | | | | | | | | |
|-----------------------------------|---------------|---------------|---------|---------|---------|---------|---------|---------|---------|---------|-------------|---------------|

the remaining classes of services demonstrate substantial regional dispersion. For example, hospitals in the Middle Atlantic States almost uniformly have larger proportions of each service or facility than any other division. The States in New England and the East North Central and Pacific divisions generally rank just under those in the Middle Atlantic division in the overall proportions of most services and facilities.

Some representative services demonstrating wide divisional variations include pathology laboratories, electroencephalography units, and pharmacies. Almost 90 percent of the hospitals in the Middle Atlantic division had pathology laboratories, compared to one-third or less in the West South Central, East South Central, and West North Central States. With regard to electroencephalography, almost four times as many

hospitals in the Middle Atlantic States had such units as the hospitals in the East South Central division. Onsite pharmacies were available in 80 percent or more of the hospitals on the east and west coasts, and in the East North Central division, almost twice as many as short-stay hospitals in the West North Central and West South Central States.

JCAH accreditation.—The 4,123 participating short-stay hospitals in the United States with no significant deficiencies had met standards equal to, or more stringent than, those promulgated by the Joint Commission on Accreditation of Hospitals.⁵ Of these, 3,768, or 91 percent, had been accredited by the Joint Commission. These accredited short-stay

⁵ See "Standards for Hospital Accreditation," Joint Commission on Accreditation of Hospitals, December 1965 (revised).

| Other services | 14.1 | 15.4 | 20.5 | 17.3 | 10.4 | 13.8 | 14.6 | 9.4 | 11.7 | 14.1 |

hospitals accounted for more than half of all short-stay hospitals (60 percent) and 85 percent of all adult beds in the United States. Table 3.1.9 shows that these proportions varied by region, with 94 percent of the beds in the Northeastern States in JCAH accredited hospitals, compared with 77 percent in the South.

AOA accreditation.—As with hospitals accredited by the Joint Commission, facilities accredited by the American Osteopathic Association were deemed to have met the standards established by regulation and embodied in the "Conditions of Participation," effective January 1, 1967, and thereafter.⁶ During 1968, 193 accredited osteopathic hospitals were participating in the program, all but one short-stay facilities. Table K shows that accredited osteopathic hospitals are located predominantly in States in the Middle West and the Southwest, and only rarely on the eastern or western coasts.

Table K.—Number and percentage distribution of participating short-stay osteopathic hospitals and beds, by division, 1968

| Division | Hospitals | | Beds | |
|--------------------------|-----------|-------------------------|--------|-------------------------|
| | Number | Percentage distribution | Number | Percentage distribution |
| United States ----- | 192 | 100.0 | 15,054 | 100.0 |

| Mountain ----- | 11 | 5.7 | 802 | 5.3 |
| Pacific ----- | 6 | 3.1 | 321 | 2.1 |

Training programs.—The quality of care in a hospital is determined in part by the presence of programs for training medical students. Hospitals applying for participation in the Medicare program report the nature of their training programs (figure 1). From these replies, institutions have been classified into three categories (table 3.1.9). Nine percent of all short-stay hospitals, containing 26 percent of the adult short-stay beds, were affiliated with a medical school, i.e., the hospital is used to some extent in a medical school's teaching program.

⁶ See "Registry of Accredited Osteopathic Institutions, 1970-71," American Osteopathic Association, 1970.

Four hundred fifty-four hospitals not affiliated with a medical school reported some type of approved intern program. In 116 additional hospitals there were one or more approved programs for training residents only.

The distribution of short-stay hospitals and adult beds, by class of training program, in the four geographic regions of the country, is shown in table L. The greatest relative concentration of participating short-stay hospitals in the United States affiliated with medical schools is in the North Central and Northeastern States, with 31.8 and 30.2 percent, respectively. Conversely, States in the West accounted for 11 percent of the affiliated hospitals.

LONG-STAY HOSPITALS

Compared with short-stay facilities, hospitals in which the average patient stay is 30 days or more are fewer in number and, in general, of much larger size. There were 646 long-stay hospitals (almost 10 percent of all hospitals) participating in the Medicare program in 1968, but these included one-third of all the adult beds. Data for these institutions are shown in the general tables in the same detail as for short-stay hospitals.

Tuberculosis hospitals.—The median size of the 120 participating tuberculosis hospitals was 104 beds. The majority of these beds, and the highest ratio of beds with respect to the Medicare population, are found in the East North Central and South Atlantic States (table 3.1.3). Almost all are State or local hospitals. The facilities and services reported by these institutions relate to the type of care for which they are primarily organized. Among the more frequently reported services (not as commonly reported in short-stay hospitals) are medical social service and occupational therapy departments (table 3.1.7). Eighty-one percent of the tuberculosis beds are in JCAH accredited institutions, and almost one-fourth of the beds are in hospitals affiliated with medical schools (table 3.1.9).

Psychiatric hospitals.—There were over 300,000 beds in the 344 psychiatric hospitals participating in the Medicare program, with a median size of 206 beds. The Middle Atlantic, New England, and Pacific States had a far higher average ratio of psychiatric

Table L.—Number and percentage distribution of participating short-stay hospitals and beds, by region and type of training program, United States, 1968

| Approved resident program only ----- | 23,625 | 100.0 | 5,932 | 25.1 | 4,894 | 20.7 | 6,771 | 28.7 | 6,023 | 25.5 |

beds per 1,000 persons enrolled than the remainder of the country (table 3.1.1). Almost two-thirds of the psychiatric hospitals are under State or local control, and these include most of the larger institutions. Two of the 57 proprietary psychiatric hospitals had as many as 200 beds; half the voluntary hospitals had fewer than 100 beds (table 3.1.6). Facilities and services reported in psychiatric hospitals also were appropriate to the particular needs of the patients in these institutions—occupational therapy, medical social service, electroencephalograph, and pharmacy service were reported with frequencies greater than those for short-stay hospitals (table 3.1.7). Almost the same proportion of hospitals and beds were accredited by the JCAH as was true for the short-stay hospitals. Almost half the psychiatric beds were in institutions affiliated with medical schools with an additional one-fourth of the beds in hospitals with resident programs only.

Table M.—Number and percentage distribution of participating long-stay hospitals, by type of hospital and bed size, all areas, 1968

| Bed size | All hospitals | Tuberculosis | Psychiatric | Other long-stay |

| 400-499 | 3.7 | 3.3 | 3.5 | 4.4 |
| 500-749 | 6.3 | 7.5 | 6.7 | 4.9 |
| 750-999 | 2.8 | 1.7 | 3.8 | 1.6 |
| 1,000-1,999 | 7.7 | 1.7 | 12.5 | 2.7 |
| 2,000 or more | 8.4 | — | 15.7 | — |

Other long-stay hospitals.—These institutions comprised 3 percent of all participating hospitals and contained 3 percent of the adult beds. Only 4 percent of these beds were in proprietary hospitals, an additional 22 percent in voluntary hospitals, and the remainder in government hospitals (table 3.1.5). There are eight long-stay beds per 1,000 enrolled population in the New England States, the highest ratio of any division for this class of hospital (table 3.1.1). For the country as a whole, over half the long-stay hospitals, containing more than two-thirds of the adult beds, were accredited by the JCAH. Over one-fourth of the beds were in hospitals affiliated with medical schools.

Christian Science sanatoriums.—Christian Science sanatoriums that are operated or listed and certified by the First Church of Christ Scientist, in Boston, may participate in the program as both “hospitals” and “extended care facilities.” Payments to Christian Science sanatoriums cover costs of services ordinarily furnished by these sanatoriums that are comparable to those for which payment is made to hospitals in the sense that services in a sanatorium are a substitute for, and not in addition to, medical services that might be furnished a person if his religious beliefs were not contrary to the use of the usual facilities. By the end of 1968, 19 such sanatoriums, distributed in 15 States, were participating as shown below. Data on these institutions are not included in either the general or text tables covering participating hospitals.

| State | Number of facilities |

Conditions of Participation

The following material is from the Code of Federal Regulations, Title 20, Chapter III, “Conditions of Participation: Hospitals” (HIR-10), Social Security Administration.

General hospitals.—In order to participate in the hospital insurance program, hospitals must satisfy requirements specified in the law and in regulations issued by the Secretary of Health, Education, and Welfare. By law, a hospital is defined as an institution primarily engaged in providing diagnostic, therapeutic, or rehabilitation services by or under the supervision of physicians to inpatients. The hospital

must maintain clinical records for all patients, have by-laws in effect for its medical staff, require every patient to be under the care of a physician, and provide 24-hour nursing service, rendered or supervised by a registered professional nurse, with a licensed practical nurse or registered professional nurse on duty at all times. An acceptable hospital utilization review plan must be in effect, and the hospital must be licensed (or meet licensing standards) pursuant to applicable State or local law. In addition, the Secretary of Health, Education, and Welfare may prescribe

other requirements that he deems necessary to protect the health and safety of the institution's patients.

Other requirements "necessary for health and safety" that are established by the Secretary may not be higher than those prescribed by the Joint Commission on Accreditation of Hospitals. However, such requirements may be varied for different areas or different types of institutions. In addition, higher requirements than those prescribed by JCAH may be established by the Secretary at the request of a State. In all instances, the requirements under Medicare must be equivalent to those established by the State for its medical assistance programs.⁷

Special certification.—Where denial of participation to hospitals seriously limits the access of beneficiaries to needed services because of such factors as isolated location or the absence of sufficient facilities in an area, the hospital may, upon recommendation of the State agency be approved as a provider of services. Such approvals (also termed "limited access" certifications) are granted only where the hospital has no deficiencies that would jeopardize the health and safety of patients, and is making the best use of existing resources to improve its services. This special certification is limited to general hospitals. Each case is decided on its individual merits, and while the degree and extent of compliance will vary, the facility must meet the original statutory conditions spelled out in the Social Security Amendments of 1965, Section 1861(e)(1)–(7), in addition to any other such requirements as the Secretary of Health, Education, and Welfare may find necessary.

Nonparticipating hospitals for emergency use.—Under the hospital insurance program, payments may also be made for emergency care provided to Medicare beneficiaries by certain nonparticipating hospitals including Federal hospitals. However, such institutions must meet all of the statutory provisions for participating hospitals except for the requirement for a functioning utilization review plan. In addition, such institutions do not have to satisfy other requirements promulgated by the Secretary for participating hospitals to protect the health and safety of their patients. The payment of benefits for emergency hospital diagnostic services or inpatient care is permitted until it is no longer necessary from a medical standpoint to care for the patient in a nonparticipating institution. To be paid under the program for emergency services, nonparticipating hospitals, like participating hospitals, must agree not to charge the patient amounts (except the deductibles) in addition to the program's payments for covered services.

Christian Science sanatoriums.—Christian Science sanatoriums that are operated or listed and certified by the First Church of Christ Scientist in Boston may participate in the program as "hospitals." Payments

to Christian Science sanatoriums cover costs of services ordinarily furnished by these sanatoriums that are comparable to those for which payment is made to hospitals in the sense that services in a sanatorium are a substitute for, and not an addition to, medical services that might be furnished a person if his religious beliefs were not contrary to the use of the usual facilities.

Tuberculosis and psychiatric hospitals.—A tuberculosis hospital is one that is primarily engaged in providing medical services for the diagnosis or treatment of the disease, by or under the supervision of a physician. Similarly, a psychiatric hospital is one primarily engaged in providing psychiatric services for the diagnosis and treatment of the mentally ill. To participate under Medicare such hospitals must meet the conditions of participation for other hospitals established in the law or by the Secretary in regulations. They must also meet certain additional special requirements. Tuberculosis and psychiatric hospitals must be accredited by the Joint Commission on Accreditation of Hospitals. Such hospitals must maintain clinical records on all patients. They must also maintain other records that enable the Secretary to determine the degree and intensity of treatment furnished to beneficiaries. Tuberculosis and psychiatric hospitals must also meet such staffing requirements as the Secretary finds necessary for the institution to carry out an active treatment program.

Tuberculosis and psychiatric hospitals may provide both active and custodial care. The special requirements relating to records and staffing, described above, are intended to help assure that the Medicare program does not pay for custodial care in either tuberculosis or psychiatric hospitals. Where such hospitals provide both active and custodial care, the distinct part, that is, the specific wing or ward, that provides active care may participate in the program if it meets the records and staffing conditions noted above and the entire facility is accredited by the Joint Commission on Accreditation of Hospitals. If the entire facility is not accredited, the distinct part providing active treatment may still participate if the latter meets conditions equivalent to the requirements for JCAH accreditation.

Utilization review plan.—The purpose of utilization review is to assure that patients are in the health facility appropriate to the care and services they require. To be acceptable, a hospital's utilization review plan must apply to all patients who are Medicare beneficiaries. It must provide for (1) the review, on a sample or other basis, of admissions to the hospital, the length of stay, and the professional services (including drugs and biologicals) furnished, with respect to the medical necessity of the services, and the most efficient use of available health facilities and services; and (2) for the review of each case of continuous extended duration. The definition of what constitutes an "extended duration" case is left to each hospital. Most hospitals have defined them as cases with stays of 30 days or more.

⁷ Standards established by the accrediting agency for osteopathic hospitals, the American Osteopathic Association, were deemed equivalent to those accorded to the Joint Commission on Accreditation of Hospitals. The policy first became operative, by regulation, during calendar year 1967.

The review should be made by either a staff committee of the institution composed of two or more physicians (with or without participation of other professional personnel), or a group from outside the institution similarly composed and established jointly by the local medical society and some or all of the hospitals in the locality, or where such a group does not exist to serve the institution, it is established in such a manner as may be approved by the Secretary.

Title VI of the Civil Rights Act.—In addition to meeting the quality standards established under the health insurance legislation, hospitals wishing to participate in the Medicare program must be in compliance with Title VI of the Civil Rights Act of 1964. In its application to Medicare, the Act requires that hospitals and other institutions participating in the program must provide access to their services and facilities without regard to the race, color, or national origin of a patient; that ancillary services and facilities be equally available to all people; and that the staff be recruited and employed in a nondiscriminatory manner. To meet these requirements, an institution must engage in no discrimination, separation, or other distinction on the basis of race, color, or national origin in providing services, facilities, or any other activities that influence the admission, care, or treatment of patients.

Certification process.—Hospitals that wish to participate under the Medicare program must apply for and establish their eligibility to do so. The hospital must demonstrate that it meets the conditions of participation described above.

Title XVIII of the Social Security Act provides that State agencies, primarily health departments, operating under agreement with the Secretary, will determine whether prospective hospitals meet the conditions of participation. The State agencies certify to the Department of Health, Education, and Welfare institutions that meet these conditions. A hospital that is found to meet the specific statutory requirements and to be in substantial compliance with additional conditions prescribed in regulations may sign an agreement with the SSA to become a participating hospital.

In carrying out their responsibilities under the health insurance program, the State agencies conduct field surveys of hospitals to determine the extent to which these facilities are in substantial compliance with the applicable conditions of participation; undertake periodic resurveys of participating facilities to determine whether they continue to meet such conditions; provide consultative services to facilities experiencing difficulties in meeting the participation requirements; identify nonparticipating hospitals that could be reimbursed under the program for emergency services; and coordinate activities under the health insurance program with activities conducted under medical assistance programs. The State agencies are reimbursed for the costs of activities they perform under the program, including related costs of administrative overhead and staff.

The regulations provide that the initial certification of hospitals found to be in substantial compliance is for a period of 2 years. If deficiencies in one or more of the conditions are found on initial survey, a resurvey must be made by the State agency within 18 months or earlier, depending on the nature of the deficiencies.

Hospitals with special certifications ("limited access") are resurveyed within 12 months or sooner if the State agency believes it appropriate. If, on resurvey, it is determined that the provider has not corrected serious deficiencies and that the factor of limited access no longer applies, the provider's participation is terminated.

Hospitals accredited by the Joint Commission on Accreditation of Hospitals were deemed to meet all the conditions for participation, except for that relating to the utilization review plan.⁸ Hospitals are certified to participate in Medicare if they are found to be in substantial compliance with the conditions of participation. In determining whether a hospital complies substantially with the conditions of participation, State agencies use a series of standards supplemented by explanatory factors for each prescribed condition as set forth in regulations of the Department of Health, Education, and Welfare. Application of these standards and factors requires a thorough evaluation of the degree to which operation of the hospital demonstrates adequate performance of the activities and functions embodied in the conditions.

Those hospitals with deficiencies in one or more of the conditions of participation may nevertheless be found to be in substantial compliance and certified for participation if the deficiency: (1) does not involve failure to meet a specific statutory requirement, (2) does not interfere with adequate patient care, (3) does not represent a hazard to patient health or safety, and (4) is one which the institution is making reasonable plans and efforts to correct. Consultative services were made available by the State agencies to help providers complete their plans for correcting all deficiencies.

If a provider is judged not to be in compliance, or after a period of participation is no longer in compliance with the conditions of participation, the State agency informs the Social Security Administration of this fact. The Social Security Administration in turn (under powers delegated by the Secretary of Health, Education, and Welfare) acts on the State agency's finding—terminating the provider's contract, if appropriate. If the provider disagrees with the Administration's decision, a review of the decision may be requested, at which time an administrative review of SSA's determination is accomplished.

An agreement may be terminated by either the provider of services or the Secretary of Health, Education, and Welfare. Beneficiaries are protected from an abrupt termination of an agreement by a provider

⁸ Hospitals accredited by the American Osteopathic Association were first accorded comparable status during calendar year 1967.

through a requirement that notice must be given by the provider to the Secretary and to the public. The length of time between the notice and the point at which the termination becomes effective is specified in regulations, but the length of time cannot be longer than 6 months.

The Secretary may terminate an agreement only after reasonable notice and only if the provider (a) does not comply with the provisions of the agreement or of the law and regulation, (b) is no longer eligible to participate, or (c) fails to provide data needed to determine what benefit amounts are payable or refuses access to financial records for verification of bills. The Secretary is required to give the provider reasonable notice and an opportunity for a hearing before making a final determination that the provider does not qualify to participate under the program or before terminating an agreement. The final administrative decision is subject to judicial review.

Level of certification.—Hospitals can be accepted for complete participation in the program at the following levels of certification:

1. With no significant deficiencies
2. With correctible deficiencies
3. Special certification

Almost 66 percent of all short-stay hospitals had no significant deficiencies, with an additional 25 percent having correctible deficiencies (table N). Significantly greater proportions of the tuberculosis and other long-stay hospitals were found to have no significant deficiencies. Psychiatric institutions had the highest proportion with correctible deficiencies—just over 36 percent.

Table N.—Number and percentage distribution of participating hospitals, by level of certification and type of hospital, all areas, 1968

| Level of certification | All hospitals | Short-stay hospitals | Long-stay hospitals | | |
|-------------------------------|---------------|----------------------|---------------------|-------------|-------|
| | | | Tuberculosis | Psychiatric | Other |
| Number | | | | | |
| All areas ----- | 6,922 | 6,276 | 120 | 344 | 182 |
| No significant deficiencies - | 4,568 | 4,123 | 93 | 218 | 134 |
| Correctible deficiencies --- | 1,740 | 1,544 | 27 | 125 | 44 |
| Special certification ----- | 614 | 609 | — | 1 | 4 |
| Percentage distribution | | | | | |
| All areas ----- | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| No significant deficiencies - | 66.0 | 65.7 | 77.5 | 63.4 | 73.6 |
| Correctible deficiencies --- | 25.1 | 24.6 | 22.5 | 36.3 | 24.2 |
| Special certification ----- | 8.9 | 9.7 | — | 0.3 | 2.2 |

Hospitals with special certification.—A total of 609 short-stay hospitals, or 8.8 percent of all participating hospitals, were accorded special certification (table O). "Special certification" is defined on page xv.

There were great variations in their distribution among the geographic divisions, more than one-third (36.4 percent) of the hospitals in the West South Central States had special certifications, compared to less than 1 percent in the New England States. The States in the East South Central, West South Central, and Mountain divisions accounted for almost 81 percent of all hospitals in this category. Texas alone accounted for almost 40 percent of all specially-certified hospitals.

Table O.—Number of participating hospitals and percent with special certification, by division and State, 1968

| Division and State | All hospitals | Percent with special certification |
|----------------------|---------------|------------------------------------|

¹ Excludes Federal hospitals participating as community hospitals.

“b. they must be covered under *hospital* insurance;

“c. the hospital must meet the requirements of the definition of a hospital (see page xix), psychiatric hospital, or tuberculosis hospital, except for the utilization review plan and the health and safety conditions prescribed by the Secretary of Health, Education, and Welfare; and

“d. it must agree *on an individual basis* not to charge any patient or other person for items or services covered by hospital insurance except deductibles and coinsurance amounts; and return any money incorrectly collected.”

There are two bases for a hospital's eligibility to provide emergency services: an “emergency” hospital

is one that agrees to the above conditions and is not federally owned; and a Federal hospital otherwise meeting the definition of a hospital. A number of hospitals that were not certified under the program (and not included in the general tables) were approved to render reimbursable inpatient services if the admission were emergency in nature. “Emergency” services were defined as “outpatient hospital diagnostic services, and inpatient hospital services which are necessary to prevent the death or serious impairment of the health of the individual and which, because of the threat to the life or health of the individual, necessitates the use of the most accessible hospital available which is equipped to furnish such services.”

The number of hospitals approved to be reimbursed

for emergency services is shown above in table P. There were 810 non-Federal emergency hospitals, with 105,780 beds, active during 1968. The South Atlantic, East South Central, and West South Central States accounted for almost 60 percent of all emergency hospitals, and 70 percent of the beds in these facilities.

As in 1967, most of the emergency hospitals in the South were so designated primarily due to failure of these short-stay hospitals to comply with certain civil rights guidelines.

Federal hospitals, by statute, cannot participate in the Medicare program unless the Secretary of Health, Education, and Welfare finds that such hospitals serve the community as a whole. During 1968, six Federal hospitals were designated as community facilities—four in Alaska, one in the District of Columbia, and

one in American Samoa. All other Federal hospitals that met the definition of a "hospital" under the 1965 amendments to the Social Security Act were approved to render "emergency" services, also as defined in the 1965 amendments. The numbers of Federal facilities and their beds, by State, are shown in table Q.

The Guide Issue of *Hospitals* (August 1, 1969), published by the American Hospital Association, shows that there were 416 Federal hospitals in the United States at the end of 1968. The present report lists 411 Federal hospitals² eligible for emergency services, and six participating fully during the same period.³

² Excludes 3 Federal hospitals in Puerto Rico.

³ The Guide Issue of *Hospitals* does not include the Federal hospital in American Samoa in its total of 416 Federal hospitals.

Sources of the Data

TO BE reimbursed for services provided, a hospital must apply for and be accepted for participation in the hospital insurance program. Data included on the applications ("Hospital Request to Establish Eligibility," Form SSA-1514, figure 1) used by hospitals to request certification for participation are recorded in the central provider records and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. Upon receipt of these forms in the Social Security Administration's central office, information provided by the hospital describing its characteristics is entered into a master provider of services file. All data shown in the general and text tables of this report are compiled from the information shown on the "Hospital Request to Establish Eligibility" (Form SSA-1514, figure 1) and on the "Certification and Transmittal" (Form SSA-1539, figure 2). The latter form is processed and transmitted by the contracting State agency upon receipt of the original provider application form. The information provided by each hospital includes such items as the State and county in which the institution is located; number of adult beds; type of control; major types of services provided; accreditation status, medical school affiliation, and approved training programs; and staff characteristics, including the number of physicians, registered nurses, qualified speech therapists, licensed practical nurses, home health aides, and other skilled medical care personnel.

When the information in the master provider of services file is combined with utilization data, it serves to relate the characteristics of facilities that provide care to the type and cost of service used by the aged.

The eligibility forms were completed by all applicant hospitals in accordance with instructions furnished by the Social Security Administration.¹ For

some items on the form, familiarity by these respondents with the well-established definitions promulgated by the American Hospital Association was assumed. These definitions and explanations are shown below.²

TYPES OF HOSPITALS

Short-stay general and special hospitals.—Includes only those where the average length of stay has been, or is, under 30 days.

Long-stay general and special hospitals.—Includes those hospitals where the average length of stay is 30 days or more. Such hospitals may be general, chronic disease, or special long-stay hospitals. Excluded are those hospitals primarily for the care and treatment of tuberculosis or mental diseases.

Tuberculosis hospitals.—Includes only those hospitals primarily engaged in providing medical services for the diagnosis and treatment of tuberculosis by or under the supervision of a physician.

Psychiatric hospitals.—Includes only those hospitals primarily engaged in providing psychiatric services for the diagnosis and treatment of mentally ill persons by or under the supervision of a physician.

Christian Science sanatoriums.—May be considered "hospitals" in respect to such items and services ordinarily furnished by the institution or additionally stipulated by the Secretary in regulations, if operated or listed and certified by the First Church of Christ Scientist, Boston, Massachusetts. These institutions are not included in the general tables.

"Special certification" facility.—Where, by reason of factors such as isolated location or absence of sufficient hospitals in an area, the denial of eligibility of a provider to participate would seriously limit the access of beneficiaries to participating facilities, an institution may, upon recommendation by the State

² See "Instructions for Completing Annual Survey of Hospitals Registered by the American Hospital Association, 1969" *Hospitals* (Journal of the American Hospital Association), Guide Issue, August 1, 1970.

¹ See the Code of Federal Regulations, Title 20, Chapter III, Part 405, "Conditions of Participation: Hospitals" (HIR-10), Social Security Administration.

agency, be approved as a provider of services. Such approvals are granted only where there are no deficiencies of such character and severity as to jeopardize the health and safety of Medicare patients. Providers receiving such special approvals furnish information periodically to the State agency to show improvement toward an acceptable level of participation.

Facility for emergency services.—A beneficiary may use a nonparticipating hospital for emergency services where these services are defined as “outpatient hospital diagnostic services and inpatient hospital services which are necessary to prevent the death or serious impairment of the health of the individual, and which, because of the threat to the life or health of the individual necessitates the use of the most accessible hospital available which is equipped to furnish the services.”³

Federal hospitals.—By statute, hospitals owned or operated by the Federal Government are excepted from unqualified participation in the program unless the Secretary of Health, Education, and Welfare finds that a Federal hospital serves as a community institution. At the present time, six Federal hospitals—four in Alaska, one in the District of Columbia, and one in American Samoa—have been designated as “community” hospitals and participate fully in the programs. Otherwise, all other Federal hospitals are authorized to render emergency services only.

CONTROL OF HOSPITAL FACILITIES

Voluntary-church. Hospitals whose governing authority is a nonprofit religious organization. For “Catholic” hospitals, this organization can be either a nursing order, national or international, or the local ecclesiastical authority, i.e., the local bishop.

Voluntary-other. Hospitals whose governing authority is a nonprofit organization other than a religious one.

Proprietary. Hospitals whose governing authority is an individual, partnership, or profit-making corporation.

Government. Hospitals whose governing authority is a unit of government. The unit may be a State, county, or city, or a city and county government jointly, or a hospital district established by a State agency.

HOSPITAL FACILITIES AND SERVICES

Adult hospital beds. Includes beds regularly available for use by inpatients. These may be beds in isolation units, quiet rooms, reception and observation units, or any other such bed facilities that are set up and staffed for use by inpatients who have no other bed facility assigned to or reserved for them. Excludes bassinets and pediatric beds, and beds in facilities that are set up and staffed only for patients re-

ceiving special procedures for a portion of their stay, or which are used only as holding facilities prior to transfer to another hospital—for example, beds in labor rooms, postanesthesia or postoperative recovery rooms, or psychiatric holding beds.

Blood bank. Facility responsible for the drawing and processing of blood from donors, the typing and compatibility procedures, the titering of antibodies, the manufacture of blood products, and the transfusion service. May also include examinations concerned with genetic application of the blood group system.

Clinical laboratory. Laboratory responsible for tests and procedures in the fields of microbiology, serology, clinical chemistry, hematology, and immunohe-matology.

Pathology laboratory. Laboratory responsible for tests and procedures in the fields of tissue pathology, exfoliative cytology, and autopsies.

Electrocardiograph. An instrument for making electrocardiograms, which are graphic tracings of the electric current produced by the contraction of the heart muscle and transmitted from a normal nodal base or from extra-node foci.

Electroencephalograph. An instrument used for the recording of the electric currents developed in the brain, by means of electrodes applied to the scalp, to the surface of the brain, or placed within the substance of the brain.

Pharmacy. A drug dispensary under the jurisdiction of a registered pharmacist regularly employed by the hospital.

Occupational therapy departments. Organized facilities and services of the hospital for the provision of occupational therapy services prescribed by physicians and administered by or under the direction of a qualified occupational therapist.

Physical therapy department. Organized facilities and services at the hospital for the provision of physical therapy services prescribed by physicians and administered by or under the direction of a qualified physical therapist.

Intensive care unit. A special area within a hospital for the treatment of critically ill patients who are under constant surveillance with emergency techniques and equipment immediately available. This unit is staffed by medical and paramedical personnel especially trained and selected for this unit.

Organized outpatient department. Organized facilities and services of the hospital for the provision of medical care, including diagnosis or treatment, or both, primarily for ambulatory patients.

Emergency department. Organized facilities and services of the hospital for the provision of emergency outpatient services for conditions considered to require immediate care. Unit must be staffed 24 hours a day.

Home care program. An organized hospital program with facilities and services for the provision of treatment services to patients in their place of residence.

Operating room. The suite or suites where surgical

³ See Section C5632, *State Operations Manual*, (HIM-7), Social Security Administration.

procedures are performed. Includes equipment such as heart pumps, cardiac monitors, and other ancillary equipment required to evaluate patients' tolerance to surgery.

Postoperative recovery room: A separate facility used exclusively to monitor patients recovering from anesthesia or to observe patients for postsurgical return to physiological stability. If these functions are combined with 24-hour intensive care, the facility is not a postoperative recovery room.

Medical social service department: Organized facilities and services for the provision of social services, under the direction of a qualified medical social worker.

X-ray, diagnostic: Use of radiographic and fluoroscopic equipment for the recognition and identification of internal conditions in a patient.

X-ray, therapeutic: Use of equipment such as radioactive cesium and iridium teletherapy units by physicians in the treatment of disease.

Radioactive isotope facility: A facility where artificial radioactive substances are used by physicians in the diagnosis and treatment of disease.

Psychiatric inpatient care unit: A specific section, ward, wing, floor, or separate building devoted primarily to the care of psychiatric inpatients.

Cobalt and radium therapy: Use of cobalt and natural radium therapy units by physicians in the controlled treatment of disease.

Rehabilitation unit: A unit that has as its primary objective the restoration of a patient to an optimal level of function through physical and restorative methods.

Extended care unit: A component in a hospital where medical care of an intensity less than that required in the hospital proper, but including 24-hour skilled nursing service and other therapeutic services,

is required for the level of care appropriate to the status of the patient as he is recovering.

Other services or facilities: May include newly emerging services or facilities, such as self-care units, units for renal dialysis, open heart surgery, etc.

ACCREDITATION AND AFFILIATION OF HOSPITALS

Accreditation by JCAH.—The Joint Commission on Accreditation of Hospitals (JCAH) evaluates hospitals for conformance to standards of accreditation. The Congress included a statutory condition in the Act whereby accreditation by the Joint Commission was deemed equivalent to meeting all the conditions for participation except the special conditions restricted only to tuberculosis and psychiatric hospitals, and to all applicant hospitals with regard to the conditions for utilization review.

Affiliation with a medical school.—A number of licensed medical schools maintain and staff component hospitals to provide the full complement of clinic training. In addition, other major hospitals have established affiliation agreements with medical schools where the hospitals have been selected by medical schools to serve as "major units" in the schools' teaching programs. These two categories of hospitals are categorized as "affiliated."

Nonaffiliated, approved intern program.—Includes nonaffiliated hospitals with intern programs approved by any one of the following: American Medical Association, American Dental Association, or the American Osteopathic Association.

Nonaffiliated, approved resident program.—Includes nonaffiliated hospitals offering approved residencies in the clinical divisions of medicine, surgery, and other special fields to provide advanced training in preparation for the practice of a specialty following internship.

Provisions of the Law

THE HEALTH insurance program for the aged, commonly called Medicare, was enacted on July 30, 1965, as Title XVIII of the Social Security Act, and became effective on July 1, 1966. The program, a part of the 1965 amendments (Public Law 89-97), makes available two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the premium. Changes in the program, effective in 1968, were incorporated in the 1967 amendments to the Social Security Act (Public Law 90-248) enacted on January 2, 1968.

Hospital Insurance Program

The hospital insurance program (Part A of Medicare) pays for a large portion of the costs of hospital and related post-hospital services. It is financed on a self-supporting basis through a tax on a portion of current earnings, paid by employees, employers, and self-employed persons. The proceeds of this tax are placed in the Hospital Insurance Trust Fund, from which reimbursements for benefits and administrative expenses incurred under the program are paid. The trust fund is reimbursed from general tax revenues for the costs of providing coverages for persons who qualify for hospital insurance but who are not eligible for monthly social security or railroad retirement benefits.

BENEFITS

Inpatient hospital benefits.—The program covers the cost of covered services in a participating hospital for up to 90 days in a “benefit period” (a period beginning with the first day of hospitalization and ending 60 days after discharge from a hospital or a skilled nursing home). Full payment is made for the first 60 days of hospitalization after a deductible of \$40 has been paid. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of \$10 a day. Each hospital insurance beneficiary also has a “lifetime reserve” of 60 additional days, subject to a copayment of \$20 a day. These additional days can be used at the patient’s option

whenever the 90 days covered in a benefit period are exhausted. The program also provides benefits for emergency services rendered in a nonparticipating hospital. Each nonparticipating hospital providing emergency services elects whether to bill the program or to charge its patients directly. If they bill the program, they are reimbursed on the basis of reasonable costs of covered services rendered. If they bill the patient, he pays the bill and submits the itemized bill to SSA for reimbursement. The reimbursement paid is 60 percent of reasonable charges for room and board and 80 percent of the charges for ancillary services.

Inpatient tuberculosis and psychiatric hospital services are also covered. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a participating psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 150-day period immediately prior to his eligibility are deducted from his days of entitlement in that benefit period, but not from the lifetime limitation.

Covered hospital services include hospital room and board in accommodations containing from two to four beds, nursing services except for private-duty nursing, drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. Coverage under the hospital insurance program does not include the services of physicians (including radiologists, anesthesiologists, pathologists, and psychiatrists) except for those services provided by interns or residents in training under approved teaching programs in a hospital.

The cost of the first three pints of blood (or equivalent amounts of packed red blood cells) furnished a patient during a benefit period is a deductible amount unless the patient arranges for replacement. Charges for any additional blood are covered under the program.

Outpatient hospital diagnostic benefits.—These benefits cover the costs of tests and related services that are ordinarily furnished by a participating hospital to its outpatients for the purpose of diagnostic study. Such services are covered subject to a \$20 deductible and 20-percent coinsurance for services furnished the beneficiary by the same hospital during a

20-day period. Beginning April 1, 1968, all outpatient hospital benefits are covered by the Supplementary Medical Insurance program and are no longer subject to these limitations.

Post-hospital home health care benefits.—These benefits cover the cost of visiting nurse services and related home health services for as many as 100 visits for up to a year following the patient's most recent discharge from a hospital or participating extended care facility, provided he has been confined for at least 3 consecutive days in a hospital. A home health plan must be developed by a physician and implemented within 14 days after the patient's discharge from the hospital or extended care facility. The home health care must be for further treatment of a condition for which he received services as an inpatient in the hospital or extended care facility.

Post-hospital extended care facility benefits.—The program pays for the reasonable cost of all covered inpatient services in participating extended care facilities for up to 100 days of such care in any benefit period, following discharge from a hospital after a stay of 3 consecutive days or more, and admission to an extended care facility within 14 days of discharge. Full payment is made for the first 20 days. For each of the remaining 80 days, the patient pays a coinsurance amount of \$5 a day.

Supplementary Medical Insurance Program

The supplementary medical insurance program (Part B of Medicare) provides coverage of physicians' services, outpatient hospital services (beginning April 1, 1968), additional home health services, other medical services and supplies, and outpatient physical therapy services furnished by qualified providers (beginning July 1, 1968). Individuals 65 years of age and over may enroll in the program regardless of whether they are eligible for social security retirement benefits. Monthly premiums paid by the individual are matched by the Federal Government and paid into the Supplementary Medical Insurance Trust Fund, which reimburses carriers for benefits and administrative expenses incurred under the program.

BENEFITS

The SMI program pays for 80 percent of the allowed charges for covered physician services and other medical services (or 80 percent of reasonable cost) after the patient has met a deductible of \$50 during a calendar year. However, payment for outpatient psychiatric physician services is limited to the lesser of \$250 or 50 percent of the allowed charges in any year after the \$50 deductible has been met. The sum and percentage are derived from the statutory provision which permits an incurred expense for out-of-hospital treatment of mental illness of only \$312.50 or 62.5 percent of actual expenses in a calendar year. Since only 80 percent of allowed

charges can be reimbursed the effective maximum becomes \$250.

To preclude the possibility of having to meet a deductible twice in a short period of time, a "carry-over" provision is applied. Accordingly, covered expenses that are incurred in the last quarter of the year and counted toward the deductible in that year are also credited toward the deductible for the following year. However, after March 31, 1968, the provisions concerning the deductible and the coinsurance do not apply to the services of radiologists and pathologists furnished to hospital inpatients.

Covered under the program are such benefits as physicians' services, including home, hospital and office visits; services and supplies, including drugs and biologicals that cannot be self-administered, that are furnished as a part of a physician's professional service, most commonly in his office, and either rendered without charge or included in the physician's bills; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray; radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment, including iron lungs, oxygen tents, hospital beds, and wheelchairs used in the patient's home (including an institution used as his home); ambulance service in cases where the use of other methods of transportation is contraindicated by the individual's condition; prosthetic devices (other than dental) that replace all or part of an internal organ, including replacement of such devices; leg, arm, back, and neck braces, and artificial legs, arms, eyes, including replacement if required because of a change in the patient's physical condition; and 100 home health visits during a calendar year—these visits being independent of those provided under the hospital insurance program.

Also covered are hospital services, incident to physicians' services rendered to outpatients, including services beginning April 1, 1968 which were previously covered under the hospital insurance program, and outpatient physical therapy services beginning July 1, 1968.

Eligibility

The hospital insurance program.—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system, regardless of whether they have applied for these cash benefits. During the period under consideration, a person could apply for hospital insurance protection even though he did not qualify for either social security cash benefits or a railroad retirement annuity if he had attained age 65 before 1968, or after 1967 with not less than 3

quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1966 and before the year in which he had attained age 65. However, hospital insurance could not go into effect until the individual attained age 65. These classes of individuals were "deemed insured" under a special transitional provision.

Federal employees who retired from the Federal service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits act of 1959, are ineligible for hospital insurance benefits under the transitional provisions. Also ineligible are aliens with less than 5 years of continuous residence in the United States, and those convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months before the month an individual files his application for entitlement. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

Supplementary medical insurance.—Persons entitled to benefits under the hospital insurance program (Part A), retired Federal employees, and persons not eligible for hospital insurance under the transitional provisions may voluntarily participate in the SMI program.

Enrollment.—Individuals may enroll in the SMI program only during specified periods—the initial and the general enrollment periods. The initial enrollment period begins with the third month preceding the one in which an individual attains age 65 and ends 3 months after the month of attainment, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

A general enrollment period was set between October 1, 1967 and March 31, 1968 for those who did not enroll in the initial enrollment period. A person who enrolls during a general enrollment period may receive benefits starting on the first of July following the general enrollment period. An eligible individual must enroll within 3 years after the close of his initial enrollment period or within 3 years after termination of prior enrollment.

An initial general enrollment period was set up at the beginning of the program for people who had attained age 65 before March 1, 1966. This enrollment period began September 1, 1965, and ended on May 31, 1966, for coverage to begin on July 1, 1966.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs if the State requests such a State-Federal

enrollment agreement to be established and pays the necessary premiums.

Enrollment terminates with the beginning of the month following the month of death. Up to April 1, 1968, railroad retirement beneficiaries and individuals entitled to monthly cash social security benefits could terminate their enrollment voluntarily by notifying the Social Security Administration in writing during a general enrollment period of the desire to withdraw from the program. Under the 1967 amendments effective April 1, 1968, beneficiaries may give notice of withdrawal at any time and their coverage will be terminated at the close of the following calendar quarter. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. The enrollee is provided a 90-day grace period for the payment of overdue premiums after which coverage is automatically terminated. An individual who previously has terminated his enrollment may re-enroll only in a general enrollment period beginning within 3 years of the date his previous enrollment had terminated. Re-enrollment, however, is allowed only once.

Financing the Program

Hospital Insurance.—The hospital insurance program is financed on a long-range, self-supporting basis through a separate schedule of increasing tax rates on the first \$7,800 of earnings in employment covered under the Social Security Act. The same tax rate applies to employees, employers, and self-employed persons. This rate was 0.35 percent in 1966, 0.50 percent for 1967, 0.60 for 1968-1972, and is scheduled to increase until it is 0.90 percent in 1987 and thereafter. The proceeds of this tax and that collected from the railroad retirement system are placed in a Hospital Insurance Trust Fund from which reimbursements for all benefits and administrative expenses incurred under the hospital insurance program are paid. The Hospital Insurance Trust Fund is reimbursed from general tax revenues for the cost of providing coverage for the almost 21½ million persons who qualify for hospital insurance but who are not entitled to monthly social security or railroad retirement benefits, that is, those "deemed insured."

Supplementary Medical Insurance.—Premiums are paid into the Federal Supplementary Medical Insurance Trust Fund by those persons enrolled for supplementary medical insurance, (or on their behalf) and a matching amount is paid from general revenues by the Federal government.

The premiums of persons receiving social security cash benefits, railroad retirement, or Federal civil service annuities are deducted from their monthly benefit checks. Persons not receiving monthly benefits are billed quarterly for premiums by the Social

Security Administration or Railroad Retirement Board and have a 90-day grace period in which to make payment. Premiums may be paid for as long as a year in advance, and for individuals financially unable to make quarterly payments, arrangements can be made for monthly payments.

The premium rate of the supplementary medical insurance program may be adjusted annually if medical costs rise. The law requires that the rate be set at an amount that will generate income to the fund sufficient to cover benefit payments and administrative costs incurred during the year. The monthly premium was \$3 for each month beginning with July 1966 and ending with March 1968; and \$4 a month beginning April 1968.

Under the 1967 amendments, States are permitted to enter into agreements with the Secretary, based on a request made before January 1, 1970, to buy in—that is, to pay the medical insurance premiums—for public assistance recipients aged 65 or over who were receiving money payments under an approved public assistance plan and for all aged persons eligible to receive medical assistance under an approved Title XIX plan.

Administration of the Program

Hospital Insurance.—Under the hospital insurance plan, groups or associations of providers, on behalf of their members, may nominate a national, State, or other public or private agency or organization to serve as intermediary in the claims process. A member of an association is free, however to receive payment from an approved intermediary other than its association's nominee, if approved by the Secretary and agreeable to the intermediary selected. In addition, a provider may deal directly with the Social Security Administration.

The Secretary may enter into an agreement with a nominated organization if he finds this to be consistent with effective and efficient administration of the hospital insurance program. The intermediary makes payments to providers for covered items and services on the basis of reasonable cost determinations and assists in the application of safeguards against unnecessary utilization of covered services. The agreement may also call for (1) furnishing consultative services to assist providers to establish and maintain necessary fiscal records and otherwise qualify as providers of services, (2) serving as a center for communicating with providers, and (3) making audits of provider records. Generally speaking, the Social Security Administration utilizes the services of the hospital insurance intermediary in making payments for home health and outpatient hospital services covered under medical insurance.

Payment may be made for a beneficiary for covered emergency inpatient hospital services or covered emergency outpatient hospital services where the hospital is not a participating facility and agrees not

to charge the beneficiary for covered services. Such a hospital may be outside the United States if it is more accessible than the nearest hospital in the United States adequately equipped to treat the patient.

Requests for payment for covered services must be signed by the beneficiary (or someone for him, if he is unable to do so). Payments are made on the basis of reasonable costs for these services to participating providers of services, that is, hospitals, extended-care facilities, and home health agencies, who have been certified for participation.

In some instances, hospitals may bill for physician services rendered to inpatients. In these cases, interim payment is made by the Part A intermediary. Depending on the nature of the billing, funds are transferred from the SMI trust fund to the HI trust fund to cover the cost of these services, or funds are paid directly from the SMI trust fund.

The intermediary selected by the provider reviews the claims for payment and pays the provider. Actual payment is made on the basis of an interim rate established between the provider and the intermediary. Final settlement based on each provider's operating year is made on the basis of a cost report submitted by the provider, and subject to an independent audit.

No payments can be made to Federal providers of services except for emergency services, unless this provider serves as a community institution. In addition, payment cannot be made to a provider for those services it is obligated to render at public expense under Federal law or contract.

Supplementary Medical Insurance.—Under the medical insurance program, the Secretary of Health, Education, and Welfare may enter into contracts with carriers for the performance of specified administrative functions. The carriers' principal function is to determine whether charges are allowable (reasonable) and to make payment.

The carrier selected by the Secretary of Health, Education, and Welfare to serve as an intermediary determines the allowed charges for bills submitted for each medical care service covered by the program and pays 80 percent of this amount after the \$50 deductible has been met.

The allowed charge for the service may be paid to the patient, or the patient may assign the bill for collection to the physician or other supplier of the service, if he is willing to accept assignment. In the former situation, the patient submits an itemized bill to the carrier and is reimbursed; in the latter, the physician or other supplier submits the bill and is reimbursed. When the payment is made directly to the physician (or supplier) on assignment, the allowed or reasonable charge determined by the carrier is the total charge. In both situations, the patient is responsible for the first \$50 of the charges for covered services he receives during the year and the amount of the bill over 80 percent of the allowed charges.

The law instructs the carrier to consider the following criteria in determining the "allowed" charge:

- (1) the customary charge for the service generally made by the physician or other person furnishing such services; and
- (2) the prevailing charge in the locality by other physicians and suppliers for similar services.

The law also specifies that the "allowed" charge cannot be higher than the charge applicable for the similar service rendered under comparable circumstances to the carriers' own policy holders or subscribers.

Carriers also have the authority and responsibility to determine, in a given case, whether a claim is for a covered service and to deny claims for noncovered or excluded items or services. In addition, carriers are to assist in the application of safeguards against unnecessary utilization of services furnished eligible individuals.

Most services covered by the medical insurance program are rendered on a fee-for-service basis.

However, services furnished under group practice prepayment plans are normally rendered in return for predetermined premium payments. In recognition of the need for special adaptation of the Medicare payment procedure for services rendered by group practice prepayment plans, the law provides that an organization which furnishes medical and other health services (or arranges for their availability) on a prepayment basis, may elect to be paid 80 percent of the reasonable cost of services in lieu of 80 percent of the allowed charge for such services.

The 1967 amendments to the Social Security Act introduced a time limit on filing of claims. For bills incurred in the supplementary medical insurance portion of the program after March 1968, claims must be filed no later than the close of the calendar year following the year in which the services are furnished. For services provided during the last 3 months of the calendar year, bills may be submitted through the end of the second year following.

Figure 1

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
SOCIAL SECURITY ADMINISTRATION

HOSPITAL REQUEST TO ESTABLISH ELIGIBILITY IN THE HEALTH INSURANCE FOR THE AGED PROGRAM

Form approved.
Budget Bureau No. 72-R717

All hospitals desiring to establish their eligibility in the health insurance program should complete this form and return it to the State agency that is handling the certification process. If a return envelope is not provided, the name and address of the State agency may be obtained from the nearest Social Security Administration district office.

Hospitals accredited by the Joint Commission on Accreditation of Hospitals will be considered to meet all of the Conditions for Participation in the program, except that of having a utilization review plan.

SUBMISSION OF THIS FORM AND ESTABLISHING ELIGIBILITY DOES NOT OBLIGATE A HOSPITAL TO PARTICIPATE. AN AGREEMENT WILL BE MADE AVAILABLE BY THE SOCIAL SECURITY ADMINISTRATION AT A LATER DATE TO HOSPITALS WHO HAVE ESTABLISHED ELIGIBILITY. THERE IS NO COMMITMENT UNTIL THE AGREEMENT IS SIGNED.

| XIV. Non-Discrimination | <p>A. The regulation of the Department of Health, Education and Welfare issued under the authority of Title VI of the Civil Rights Act of 1964 requires every institution receiving financial assistance under any program administered by the Department to file an assurance of its compliance with the requirements of such regulation. The hospital insurance benefits program under Part A of Title XVIII of the Social Security Act is one of the programs which is covered by Title VI of the Civil Rights Act and to which the regulation is applicable. Have you already evaluated the availability of your services, your admission and room assignment practices, your practices in the granting of staff privileges, and your training programs (if any), and satisfied yourself that they are in compliance with the requirements of Title VI of the Civil Rights Act of 1964 and the applicable Federal Regulations?</p> <p style="text-align: center;">1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No</p> | | | | | |

Other Data Sources on the Health Insurance for the Aged Program

The *Health Insurance Statistics* series is designed to present current, quick-release data from the Medicare program. Two report series are issued in this format:

The Health Insurance (HI) series has included numerous releases since 1967. Issues released prior to 1970 are out of print, but available in many libraries.

The Current Medicare Survey (CMS) series, based on data from the continuing Current Medicare Survey, has included numerous releases since 1967. These issues are available in most libraries.

Future releases in the HI and CMS series may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 3643, HEW North Building, 330 Independence Avenue, S.W. Washington, D.C. 20201.

The *Social Security Bulletin*, published monthly, presents authoritative articles and analyses of medical care expenditures, prices, and utilization as well as current operating statistics from the

Medicare program. The *Annual Statistical Supplement* to the *Bulletin* includes summary data on trust funds, services, claims, enrollment, average charges and participating providers of service under Medicare. The *Bulletin*, including the *Supplement* is available in most libraries and by subscription at \$4 a year from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The *Research and Statistics Note* series report on-going research, preliminary findings or provide addenda to material already published on the old-age, survivors, disability, and health insurance program. Designed to get information quickly into the hands of users, the series includes data on medical care prices, outlays, and expenditures. The series is available in many libraries. Future releases may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 3643, HEW North Building, 330 Independence Avenue, SW. Washington, D.C. 20201.
